

## How to use this arboretum

To locate and identify the trees, print out this map and tree guide and take to the park. The trees inside the park near the parking lot have been identified. Match the number of the tree on the map with the tree on the guide.

Look at the shapes of the leaves and the trees. Do the trees have special features such as cones or seeds? Do they have flowers or fruit? Come back at different times of the year and see how the trees change over time.
